Reece Boston, Ph.D. Physics

numerical astrophysics researcher

expert scientific software engineer

tel: 770.355.0261
email: reece@thebostons.us
github: rboston628
linkedin: reece-boston

- C++ (>10yr) - python (>4yr) 
tools: git, gnu/linux, bash, github actions CI/CD, conda/mamba, vscode

Work Experience

Scientific Software Engineer at ORNL — **Mar 2023 - present**

Quant Researcher at Anchorage Digital (transitioned following FTX collapse) — **Oct 2022 - Mar 2023**

R&D Data Scientist at Community (role ended in post-covid tech downturn) — **Sep 2021 - Jun 2022**

Research Assistant at University of North Carolina — **Aug 2016 - May 2022**

Selected Projects

Thrain: High-precision asteroseismology code for simple white dwarf stars — **UNC**

role sole dev and designer; developed during dissertation research

impact enabled ensemble fitting to validate long-standard hypothesis in stellar evolution

tech C++ [low-level, manual memory management], written in text editor, compiled in gcc

SNAPRed: Data reduction code for highly-reconfigurable neutron scattering instruments — **ORNL**

role senior developer; co-designed system architecture

impact built NoSQL-based tool to map instrument states to calibrations

tech python [pydantic, pytest, PyQt5]

Mantid: Multi-institutional neutron data analysis platform and python API — **ORNL**

role contributor and gatekeeper

impact refactored legacy file management system using the strangler pattern

tech C++17/20 [cmake, cxxtest, hdf5/H5Cpp, STL]
